TGA2512-SM

4 -14 GHz GaAs Balanced LNA

Product Description

The Qorvo TGA2512-SM is a packaged X-band balanced LNA with AGC amplifier for EW, ECM, and RADAR receiver or driver amplifier applications. Based on Qorvo's GaAs 3MI pHEMT process, the TGA2512-SM provides excellent noise performance with typical midband NF of 2.3 dB, with a high gain of 25 dB from 4-14.2 GHz

The TGA2512-SM is designed for maximum ease of use. TGA2512-SM can handle up to 21 dBm input power reliably, while the build-in gain control provides 15 dB of typical gain control range. The part can be used in self-biased mode, with a single +5 V supply connection, or in gate biased mode, allowing the user to control the current for a particular application.

In self-biased mode the TGA2512-SM achieves 6 dBm typical P1 dB, while in gate-biased mode the typical P1 dB is over 13 dBm.
