Product Overview

Mini-Circuits' ZX60-33LNR-S+ is a wideband low noise connectorized amplifier providing a unique combination of low noise figure, and high IP3 over a wide frequency range, supporting a wide range of sensitive, high-dynamic range receiver applications and many systems where high performance over wideband is needed. This design operates on a single 5V supply and comes in a rugged, compact unibody case (0.74 x 0.75 x 0.46") with SMA connectors, making it an excellent candidate for tough operating conditions and crowded system layouts.

Key Features

Feature	Advantages
Wideband 50 to 3000 MHz able to work from 20 to 3300 MHz	Enables a single amplifier to be used in a wide range of applications including cellular, GPS, bluetooth , defense, instrumentation and more.
Low noise over the whole band, 1.1 dB typ.	Enables lower system noise figure performance.
High gain, 17.5 dB typ.	Reduces the number of gain stages, lowering component count and overall system cost.
High IP3, up to 35 dBm typ.	The combination of low noise and high IP3 makes the ZX60-33LNR-S+ ideal for use in low noise receiver front end (RFE) as it gives the user the advantages of sensitivity and two-tone IM performance at both ends of the dynamic range.
Rugged, unibody construction	Mini-Circuits unibody construction integrates the RF connector into the case body, providing high reliability and excellent survivability in critical applications.
